```
St., Albany, CA 94710, USA
On Feb 11, 2000 this sequence version replaced gi:6693723.
The sequence is of BAC F14D7 from Arabidopsis thaliana chromosome
1. The sequence does not represent the sequence of the entire
insert of this clone. It is shorter by 6954 bp because we submit
only the unique sequence of the clone. However, in order to
facilitate the joining of overlapping clones in the future for
creation of larger contigs, we provide small overlaps (200 bp)
between overlapping sumbitted clones. The 5' end of this sequence
overlaps by 200 bp to the 3' end of the sequence of the clone
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Eukaryota; Viridiplantae; Streptophyta; Embryophyta; Tracheophyta; Spermatophyta; Magnollophyta; eudicotyledons; core eudicots; rosids; eurosids II; Brassicales; Brassicaceae; Arabidopsis.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           and encoding nucleic acids comprising a polynucleotide sequence encoding a polypeptide that functions as a modulator of seed storage compounds in a plant. The LMP nucleic acid is useful in producing transgenic plants with increased levels of seed storage compound, e.g. lipid, a fatty acid, a starch or a seed storage protein, as markers for specific regions of the genome and for evolutionary and protein structural studies. The present sequence represents an LMP nucleic acid of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New lipid metabolism proteins and nucleic acids, useful transgenic plants with increased levels of seed storage lipid, a fatty acid, a starch or a seed storage protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Mittendorf V,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       문
This invention relates to a novel method for altering one or more plant characteristics. Specifically, it refers to identifying genes that are up or down-regulated in transgenic plants overexpressing the heterodimeric E2Fa/DPa transcription factor of Arabidopsis and using these sequences to alter plant characteristics accordingly. The present invention describes generating transgenic plants for the production of growth regulators, enzymes, therapeutics, pharmaceuticals and animal feed products, where the altered plant characteristics are selected from increased yield or biomass, enhanced survival capacity, stress tolerance, plant architecture or physiology, altered endoreduplication, biochemistry, signal transduction, storage lipid mobilisation and/or altered photosynthesis,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       each relative to the corresponding wild type plants. Accordingly, these sequences can also be useful as positive or negative selectable markers during transformation of cells or tissues. The identified genes play a role in a variety of biological processes such as DNA replication, cell wall biosynthesis, nitrogen and/or carbon metabolism or they function a transcription factors. This polynucleotide sequence is thale cress cDNA repressed 1.3 fold or more in plants overexpressing the E2Fa/Dpa transcription factor, given in an exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence

New recombinant nucleic acid molecules and polypeptides from Gossypium hirsutum, useful for producing plants with improved biological characteristics (e.g. improved plant cold or drought tolerance).
                                                                                                                                                                                                                                                         WPI;
Claim 1; SEQ ID NO 4242; 14pp; English
                                                                                                                                                                                                                                                         2004-667718/65

invention relates to a recombinant polynucleotide comprising any

comprises transforming a plant having an improved property. Producing a plant having an improved property comprises transforming a plant with a recombinant construct comprising a coding sequence for a polypeptide associated with the property, and growing the transformed plant. The polypeptide is couseful for improving plant cold tolerance, manipulating growth rate in the property, and growing the transformed plant. The polypeptide is colding increased resistance to plant disease, conducing galactomannan (or lignin or plant growth regulators), improving plant tolerance, providing increased resistance to plant disease, conducing galactomannan (or lignin or plant growth regulators), improving plant tolerance to extreme osmotic conditions or to pathogens or peste, improving yield by modification of photosynthesis, modifying seed oil or protein yield complete the and/or content, improving yield by modification of photosynthesis, modifying seed oil or protein yield constructs, in physical arrays of molecules, as plant breeding markers, constructs, in physical arrays of molecules, as plant breeding markers, constructs, in physical arrays of molecules, as plant breeding markers, constructs, in physical arrays of molecules, as plant breeding markers, constructs, in physical arrays of molecules, as plant breeding markers, constructs, in physical arrays of molecules, as plant breeding markers, constructs, in physical arrays of molecules, as plant breeding markers, constructs, in physical arrays of molecules, as plant breeding markers, constructs, in physical arrays of molecules, as plant breeding markers, constructs, in physical arrays of molecules, as plant breeding markers, constructs, in physical arrays of molecules, as plant breeding markers, constructs, in physical arrays of molecules, as plant breeding markers, constructs, in physical arrays of molecules, as plant breeding markers, constructs, providing the providing physical arrays of molecules, as plant breeding markers, constructs, providing physical arrays of mo the 58798 Cotton plant cDNA sequences mentioned in the specification. Also a recombinant polypeptide comprising any of the 58798 amino acid sequences mentioned in the specification and producing a plant having Ģ, an

Sequence 1184 BP; 375 A; 233 C; 281 G; 295 Ŧ; 0 U; 0 Other;

```
The present invention describes isolated polynucleotides (PN) comprising a sequence selected from one of 835 nucleotide sequences given in AAA67073 to AAA67907, their (reverse) complements, sequences given in Expectation (E) value of 0.01 or less compared to the 835 sequences, sequences at least 50% identical to them, 200, 100, 40 or 20-mers of the 835 sequences or sequences that are degenerately equivalent or allelic to the 835 sequences. The polynucleotides are used to modify the activity of a polypeptide involved in a polysaccharide biosynthetic pathway in the plant. They are especially used to modulate or alter the polysaccharide content, composition or structure of the plant. AAB16286 to AAB16340 are proteins encoded by some of the polynucleotide sequence given in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New genes encoding proteins involved in a plant polysaccharide biosynthetic pathway, useful for modulating or altering the polysaccharide content, composition or structure of the plant.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                P-PSDB; AAB16294.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      δ
The present invention describes isolated polynucleotides (PN) comprising a sequence selected from one of 835 nucleotide sequences given in AAA67073 to AAA67907, their (reverse) complements, sequences producing an Expectation (B) value of 0.01 or less compared to the 835 sequences, sequences at least 50% identical to them, 200, 100, 40 or 20-mers of the 835 sequences or sequences that are degenerately equivalent or allelic to the 835 sequences. The polynucleotides are used to modify the activity of a polypeptide involved in a polysaccharide biosynthetic pathway in the plant. They are especially used to modulate or alter the polysaccharide content, composition or structure of the plant. AAB16268 to AAB16340 are
                                                                                                                                                                                                                                                                                                                                  New genes encoding proteins involved in a plant polysaccharide biosynthetic pathway, useful for modulating or altering the polysaccharide content, composition or structure of the plant.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Eucalyptus grandis; pinus radiata; Monterey pine; modification; plant cell wall; polysaccharide; polysaccharide biosynthetic patransgenic plant; ds.

                                                                                                   US-10-690-564-2 (1-317) x AAF44756 (1-1293)
                                                                                                                                                      Percent Similarity:
                                                                                                                                                                                    Alignment
                                                                                                                                         Local
                                                                                                                                                                                                                        The present invention relates to coding sequences (see AAF44740-F44840 and AAF44843-F44844) and proteins (see AAB65714-B65814) involved in programmed cell death (PCD; appotosis). The coding sequences and proteins of the present invention are useful for modulating a PCD or cell death pathway and various developmental pathways in a forestry plant, by stably incorporating one of the present coding sequences into the genome of the forestry plant, where the coding sequence provides a PCD pathway that is not present in a native form of the forestry plant
                                                                                                                                                                                                                                                                                                                                               Novel defender against cell death polynucleotide useful for modulating programmed cell death pathway and specific development pathways in

The methods and compositions of the present invention to do with (I) are useful for modulating programmed cell death and thereby altering the development cycle of plant cells, and altering plant development. This sequence encodes a protein associated with the programmed cell death pathway.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New isolated polynucleotide useful altering the development cycle of plant development.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Alignment
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                nucleotide sequence that is one of 145 fully defined sequences of 221-3415 base pairs (bp), given in the specification, and/or its complements, reverse complements, reverse sequences, or sequences having 75, 90 or 95 $ sequence identity to or that hybridise under stringent hybridisation conditions to one of the 145 sequences. The methods and compositions of the present invention to do with (I) are useful for modulating programmed cell death and thereby altering the development cycle of plant cells, and altering plant development. This sequence encodes a protein associated with the programmed cell death pathway.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New isolated polynucleotide useful for modulating programmed cell death, altering the development cycle of plant cells, and subsequently modifying

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 S
The present invention describes a method for identifying and validating plant genes/proteins as targets for agrochemicals comprising determining the expression profiles of a plant and downregulating the expression of the gene or protein in the plant or plant cell. Also comprising the use of the above method or the use of any of the 785 fully defined nucleotide sequences (ADF37942 to ADF38726) or protein sequences, or their homologues, functional fragments or derivatives; (2) a method for producing an agrochemical resistant plant, comprising the use of the above mentioned nucleotide or protein sequences; (3) an isolated nucleotic acid that is identified by any of the above methods or that comprises at least a part of a nucleic acid sequence chosen from any of the 785 nucleotide sequences given in the specification; (4) a plant tolerant to an agrochemical, in which the expression level of one or more of the nucleic acid sequences given in the specification is modulated; and (5) a harvestable part of the plant described above. The method is useful in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Identifying and validating plant genes or proteins as targets for agrochemicals, useful for producing agrochemical-resistant plants, comprises determining and down regulating the gene or protein expportiles of a plant.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Synchronised tobacco BY2 cDNA sequence SEQ ID
